

Seasonal Agro-Climat outlook for July-September 2021

Seasonal climate outlook is based on the coupled forecast system models. The outlook is depicted in figures in terms of daily fluctuations of Maximum and Minimum Temperatures and Precipitation with a focus on major agriculture zones. The main purpose of seasonal outlook is to facilitate agriculture community for pre-planning their field activities as per expected weather conditions. Dry/ wet spells during the season are highlighted. This forecast is a careful estimation of aforementioned weather parameters averaged over a specific area.

Kashmir is expected to receive consistent rainfalls (with few heavy downpours) throughout the period. Orchids and Maize (on a smaller scale) are there at present and would get benefitted from these rains. The minimum temperature would remain between 11° to 21°C following the season. Similarly, the maximum temperature may remain within the range of 17° to 36°C as per seasonal pattern.
