

Seasonal Agro-Climat outlook for July-September 2021

Seasonal climate outlook is based on the coupled forecast system models. The outlook is depicted in figures in terms of daily fluctuations of Maximum and Minimum Temperatures and Precipitation with a focus on major agriculture zones. The main purpose of seasonal outlook is to facilitate agriculture community for pre-planning their field activities as per expected weather conditions. Dry/ wet spells during the season are highlighted. This forecast is a careful estimation of aforementioned weather parameters averaged over a specific area.

Gilgit Baltistan would receive multiple spells of light to moderate rainfall throughout the specified period except in August with few heavy downpours during the 2nd fortnight of September. No prominent agricultural crop but orchids, maize on a smaller scale and few vegetables are there at present. Accordingly, the expected rains would benefit these products. The minimum temperature would remain between -02°C to 12°C following the season. The maximum temperature may remain within the range of 4°C to 25°C as per seasonal pattern.
